

```
"""
```

Upload a file to a GitHub repository using the GitHub API.

Setup:

```
pip install PyGithub
```

Before running:

1. Create a GitHub Personal Access Token:

GitHub -> Settings -> Developer settings -> Personal access tokens

(classic token with 'repo' scope is enough)

2. Fill in the CONFIG section below.

```
"""
```

```
from github import Github
```

```
# ----- CONFIG -----
```

```
GITHUB_TOKEN = "your_personal_access_token" # your GitHub PAT
```

```
REPO_NAME = "username/repo-name" # e.g. "jagansai/categorical-encodi
```

```
FILE_PATH = "local_file.ipynb" # path to file on your machine
```

```
PATH_IN_REPO = "notebooks/local_file.ipynb" # destination path in the repo
```

```
COMMIT_MESSAGE = "Add categorical feature mapping and label encoding notebook"
```

```
BRANCH = "main"
```

```
# -----
```

```
def upload_file():
```

```
    # Connect to GitHub
```

```
    g = Github(GITHUB_TOKEN)
```

```
    repo = g.get_repo(REPO_NAME)
```

```
    # Read local file content
```

```
    with open(FILE_PATH, "rb") as f:
```

```
        content = f.read()
```

```
    # Create new file, or update it if it already exists
```

```
    try:
```

```
        existing_file = repo.get_contents(PATH_IN_REPO, ref=BRANCH)
```

```
        repo.update_file(
```

```
            path=PATH_IN_REPO,
```
